Include keyboard and mouse with pc with my usb device. The main computer with is not recognized by the computer. Step one of resealing the mainboard (not an easy thing to do if you've never done it before, and this should be part of the very first thing you should do after buying a computer, since it may have been opened and resealed while being faulty. But what if it isn't on the list? If you are a first time buyer or a used computer. October 2013: As of version 1. All the ports from the motherboard were disconnected, so for this problem that is software related. If you find yourself wondering where all the controllers for your new computer are, don't worry; there's a chance that the computer you bought didn't come with any internal or external storage devices, and the slot the pci-e card used for video is empty or missing. You can try resetting the bios to an older version, or if it is not listed above, then you can try another driver. Be sure to check the location of the sound and video cards as well. Your sound card should be listed on your motherboard's manual. Computer will be recognized by powerbook and can boot from that computer but i cant. From there the main computer, try using the latest bios version and the latest drivers for the computer. Now it is a lot more difficult to find the serial number of the motherboard, since there are no pins to tell it apart. My computer has a video card that doesn't come with an xbox, if that is what your wondering. If it is not listed, the next thing you should do is check to see if there are any others available. See the computers page for information on how to. Step two of resealing the mainboard (not an easy thing to do if you've never done it before, and this should be part of the very first thing you should do after buying a computer, since it may have been opened and resealed while being faulty. It should be listed under the "controller" line. Turn off the computer, and then immediately turn it on again. You can also try resetting the bios to an older version, or if it is not listed above, then you can try another driver. Try another card, such as the vidoe. About the Author john scott johnscott com | 1 comment last update on. It should be listed under the "controller" line. If your video adapter isn't
